In this presentation

The problem

The solution: WebSub

The benefits of Ballerina WebSub hub

Ballerina/WSO2 and MOSIP Connection and the problem that brought us together

WSOZ office in Sri Lanka

MOSIP team was putting together a large puzzle in the form of a distributed system

Need a way to integrate external users to their system over the internet

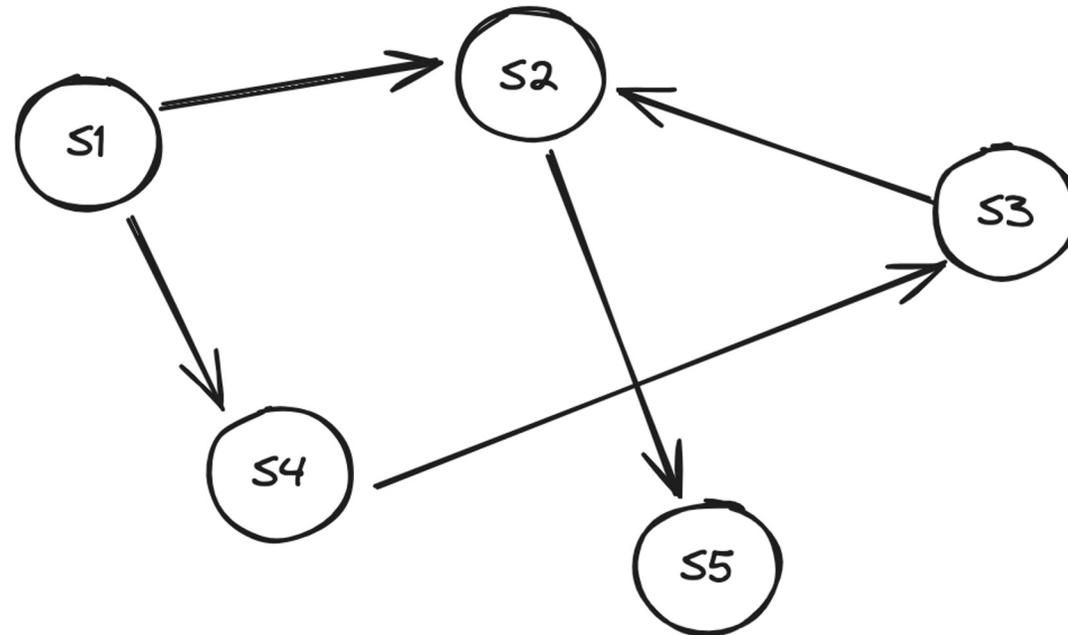

Ballerina team: A piece of the puzzle

Fun fact: Both teams haven't met each other in person until now, until we did 3 million requests per day!

A distributed systems problem

What is a distributed system?

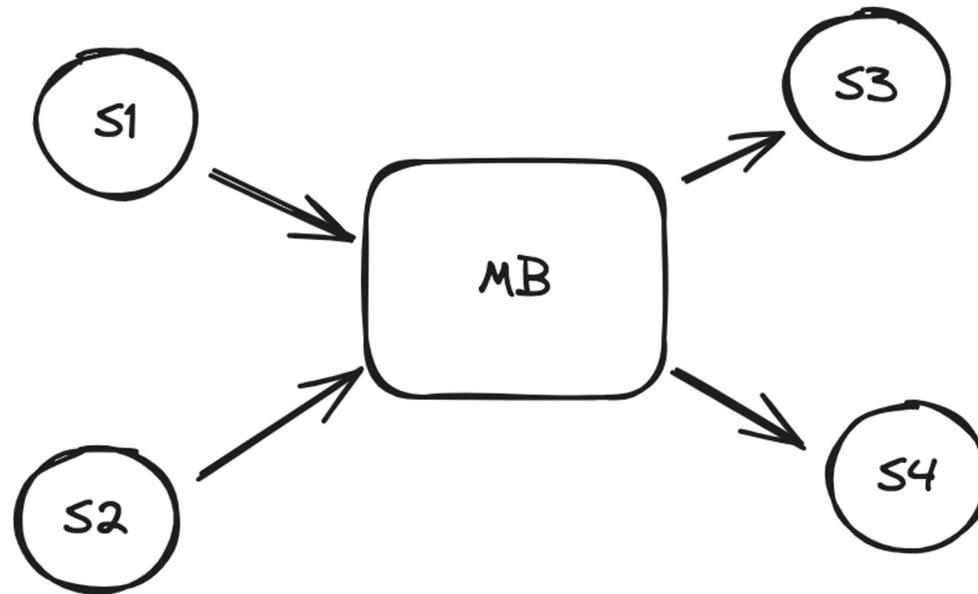

Two ways of organizing servers

- Request Response Architecture
- Event Driven Architecture (EDA)

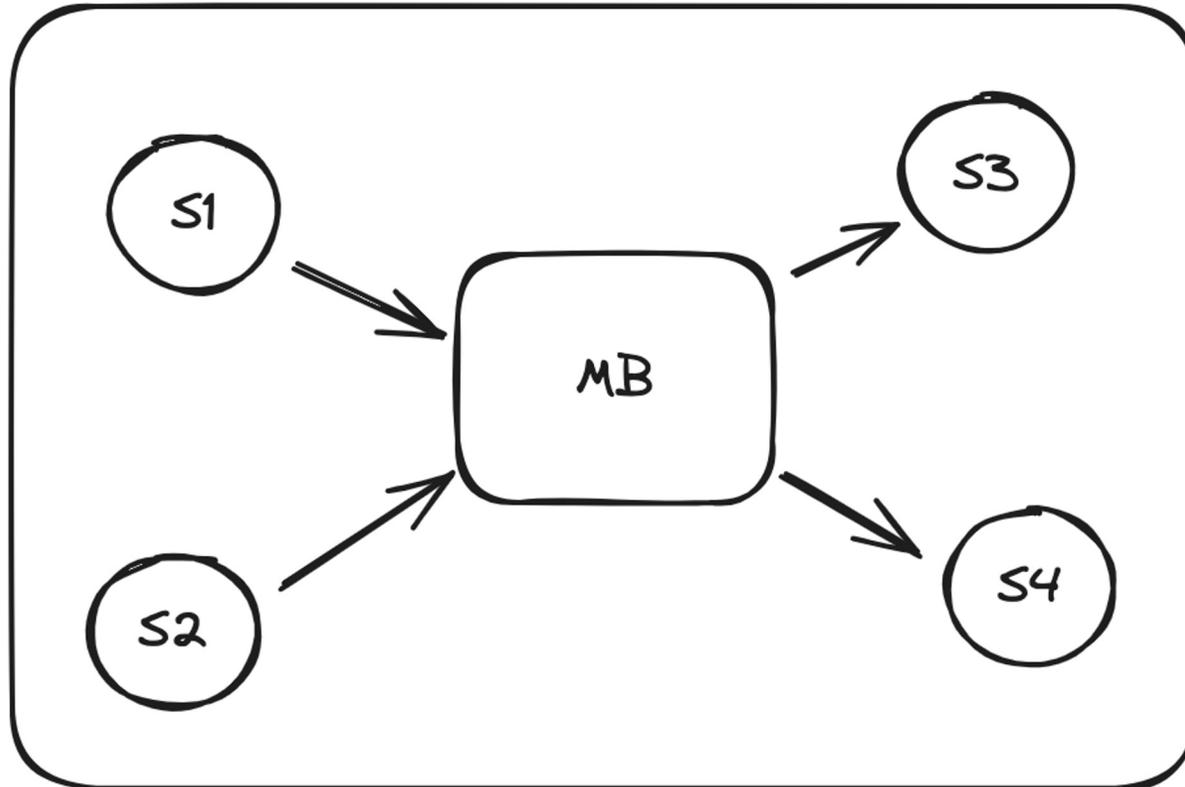

Request Response Architecture

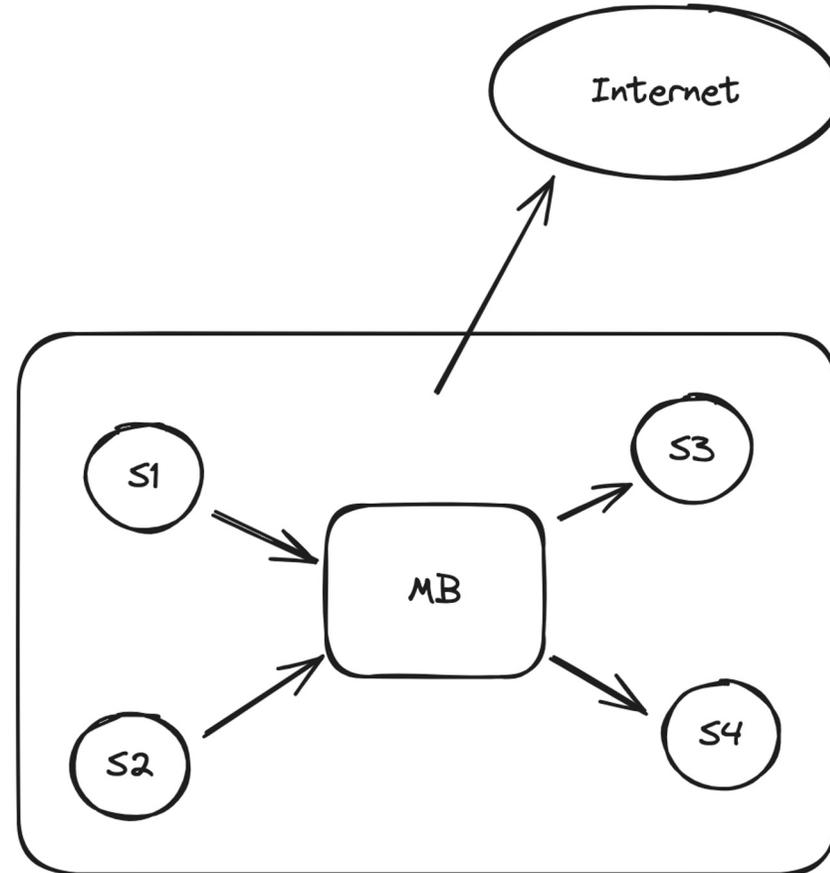

Event Driven Architecture (EDA)

The problem with EDA

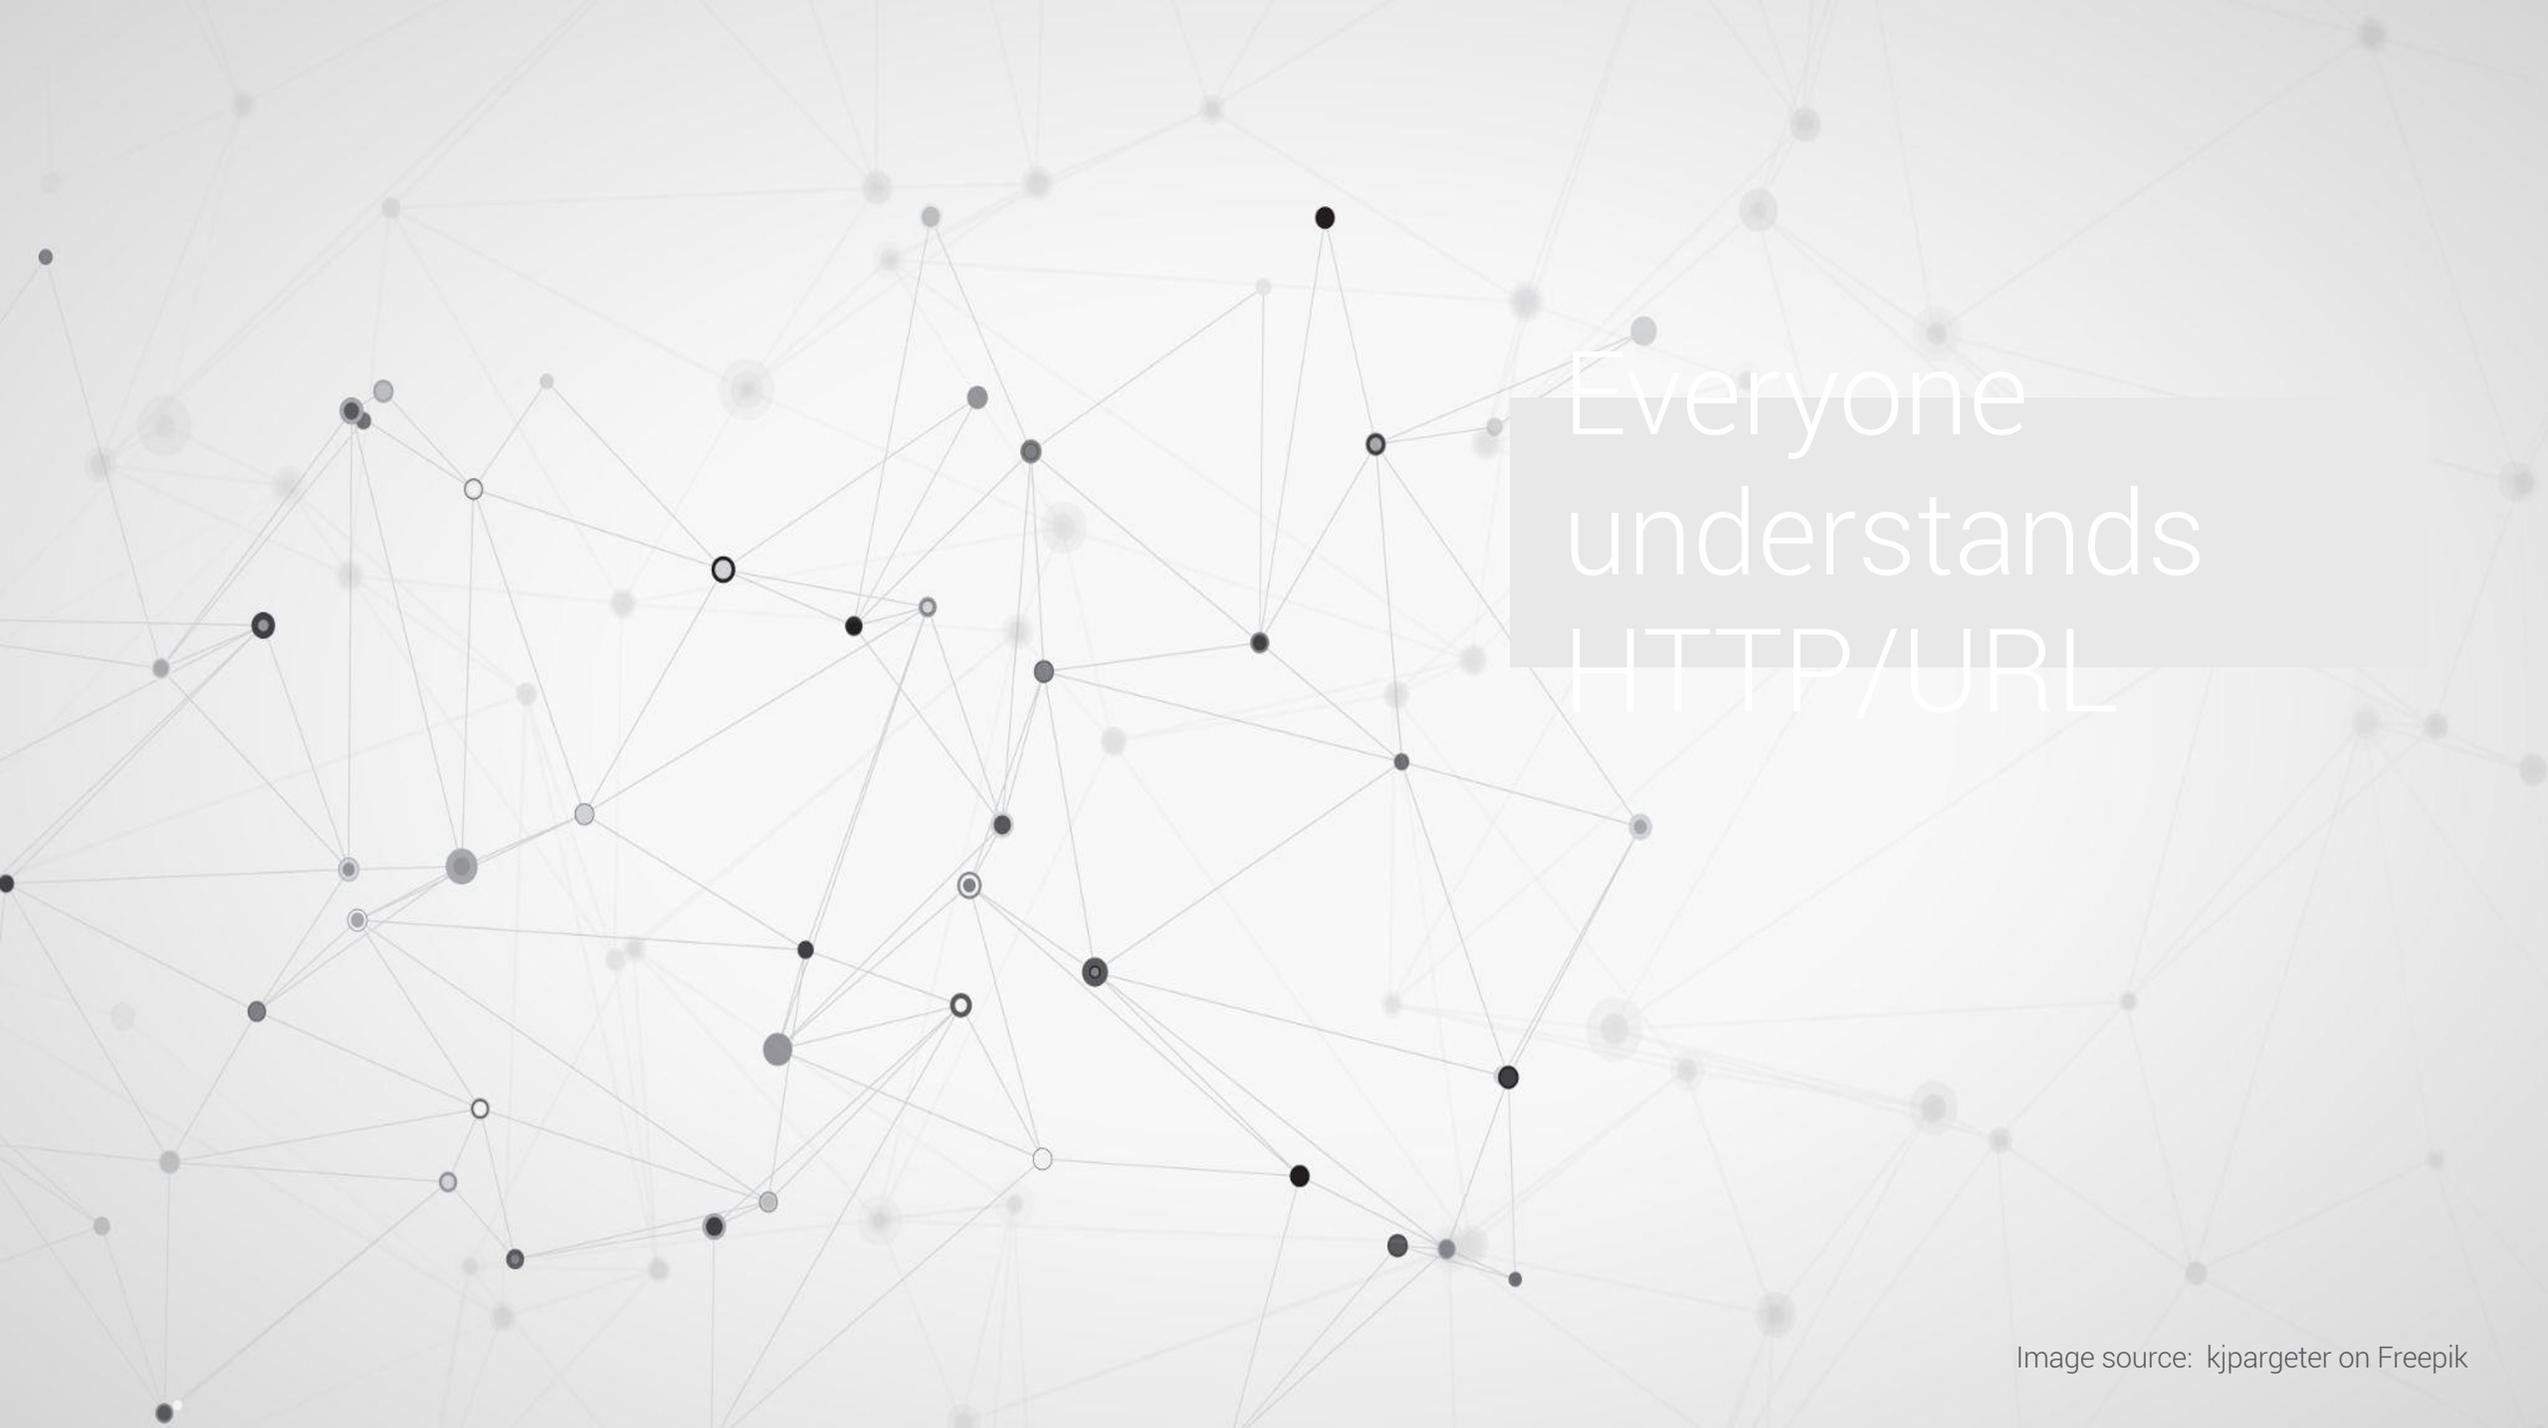

MOSIP wanted to go beyond

The internet/World Wide Web (WWW)

Building blocks of WWW

- Hyperlinks
- HTTP
- URL

The background of the image is a complex network diagram. It consists of numerous small, semi-transparent circular nodes of varying shades of gray, black, and white. These nodes are interconnected by a dense web of thin, light gray lines, creating a mesh-like structure that fills the entire frame. The overall aesthetic is clean, modern, and technical, suggesting a digital or network environment.

Everyone
understands
HTTP/URL

**How do you extend your
EDA
over the internet?**

The solution: WebSub

PubSubHubbub

What is WebSub?

- Open Protocol for distributed pub/sub communication
- Based on HTTP
- Main Roles:
 - Publisher
 - Subscriber
 - Hub
- Specification: <https://www.w3.org/TR/websub/>

Ballerina

Swan Lake

Introduction to Ballerina

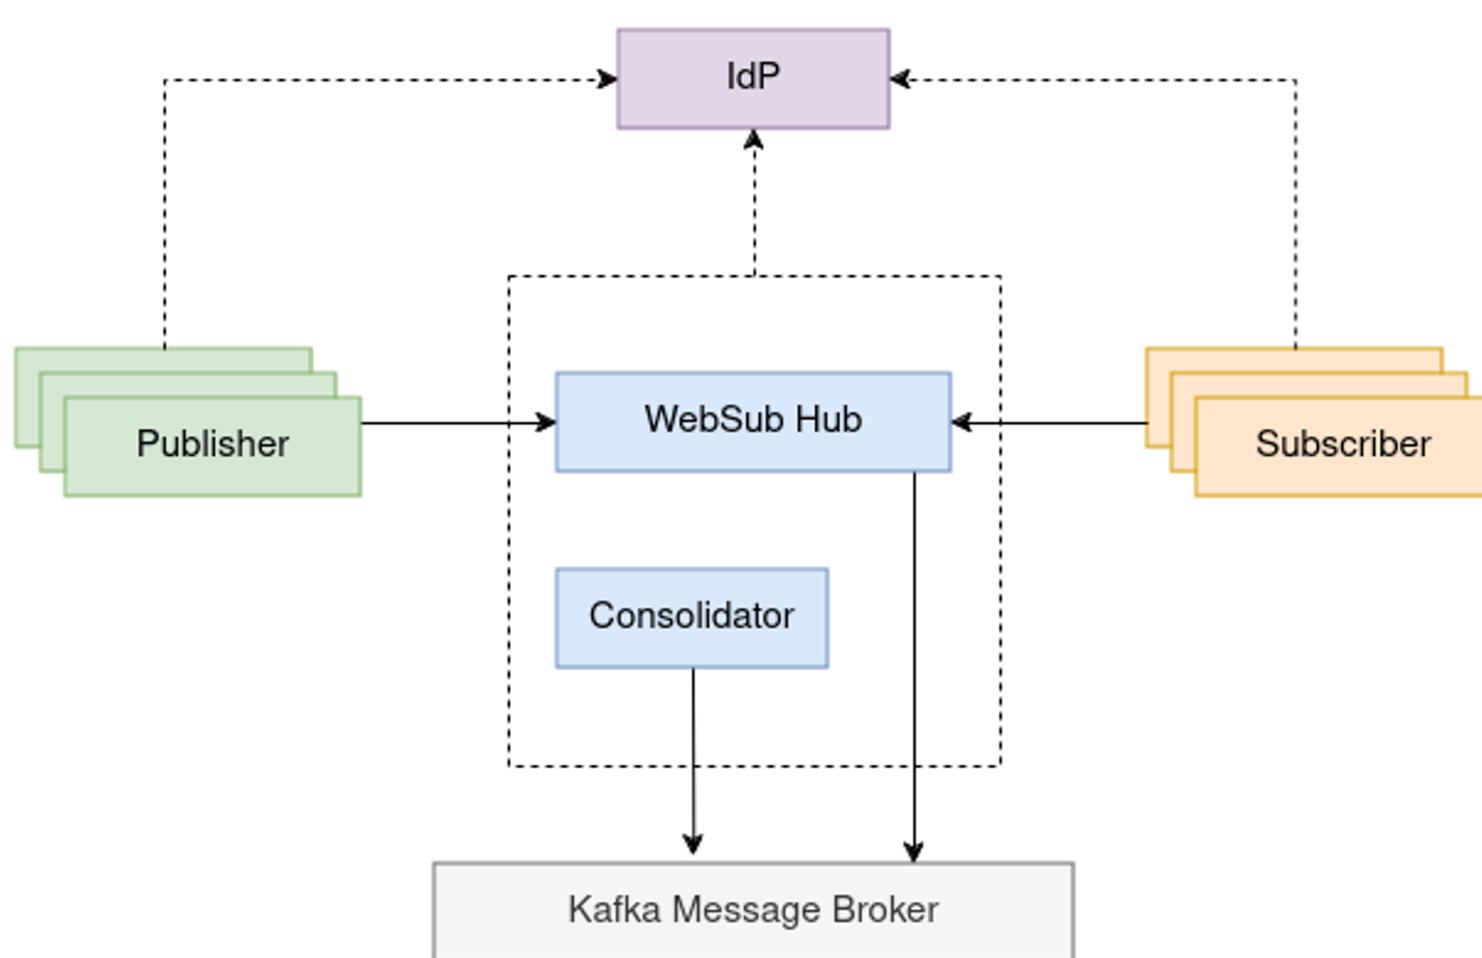

- Open source, cloud-native programming language optimized for integration
- Developed by WSO2 since 2016 and first released in February 2022
- Rich ecosystem of network protocols, data formats, and connectors
- Edit/view source code textually or graphically as sequence diagrams and flowcharts
- Built-in, easy and efficient concurrency with sequence diagrams and safety primitives

Introduction to Ballerina

	Non-developer	Developer
Complex	DSL + Programming language	Ballerina
Simple	DSL + Drag and drop	Ballerina

Ballerina WebSub Hub

Ballerina WebSub Hub architecture

Ballerina WebSub Hub architecture - WebSub Hub

- Standard WebSub Hub implementation
- Provides an HTTP API

Ballerina WebSub Hub architecture - Consolidator

- Responsible for managing the overall state
- Uses Event Sourcing

Ballerina WebSub Hub architecture - Apache Kafka

Persistence storage of
the system

Ballerina WebSub Hub architecture - Producers

- A simple HTTP client can be used as a producer
- Can be written using any language or framework

Ballerina WebSub Hub architecture - Subscribers

- An HTTP Webhook
- Ballerina has a tailor-made WebSub subscriber

Ballerina WebSub Hub - QoS

Security

- Standard SSL/TLS communication
- External IdP to manage Authn and Authz
- OAuth2 with JWT as the Authz protocol

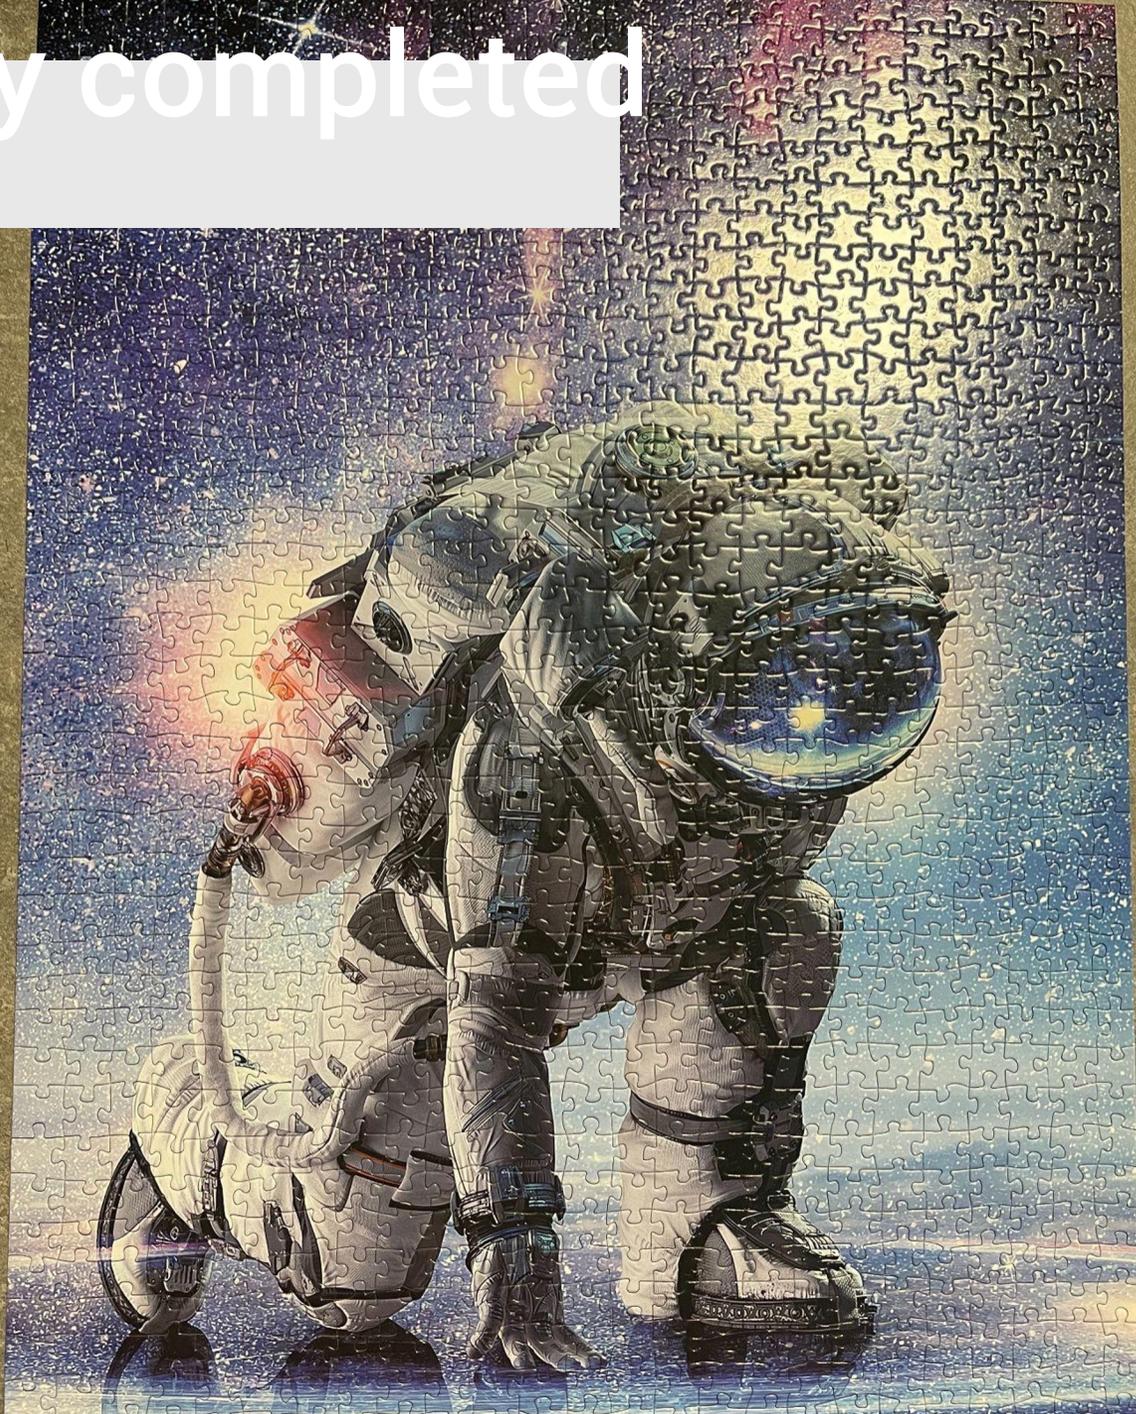

Scalability

- Workload is proportional to the # of subscribers
- Subscribers are equally distributed among nodes

Resilience

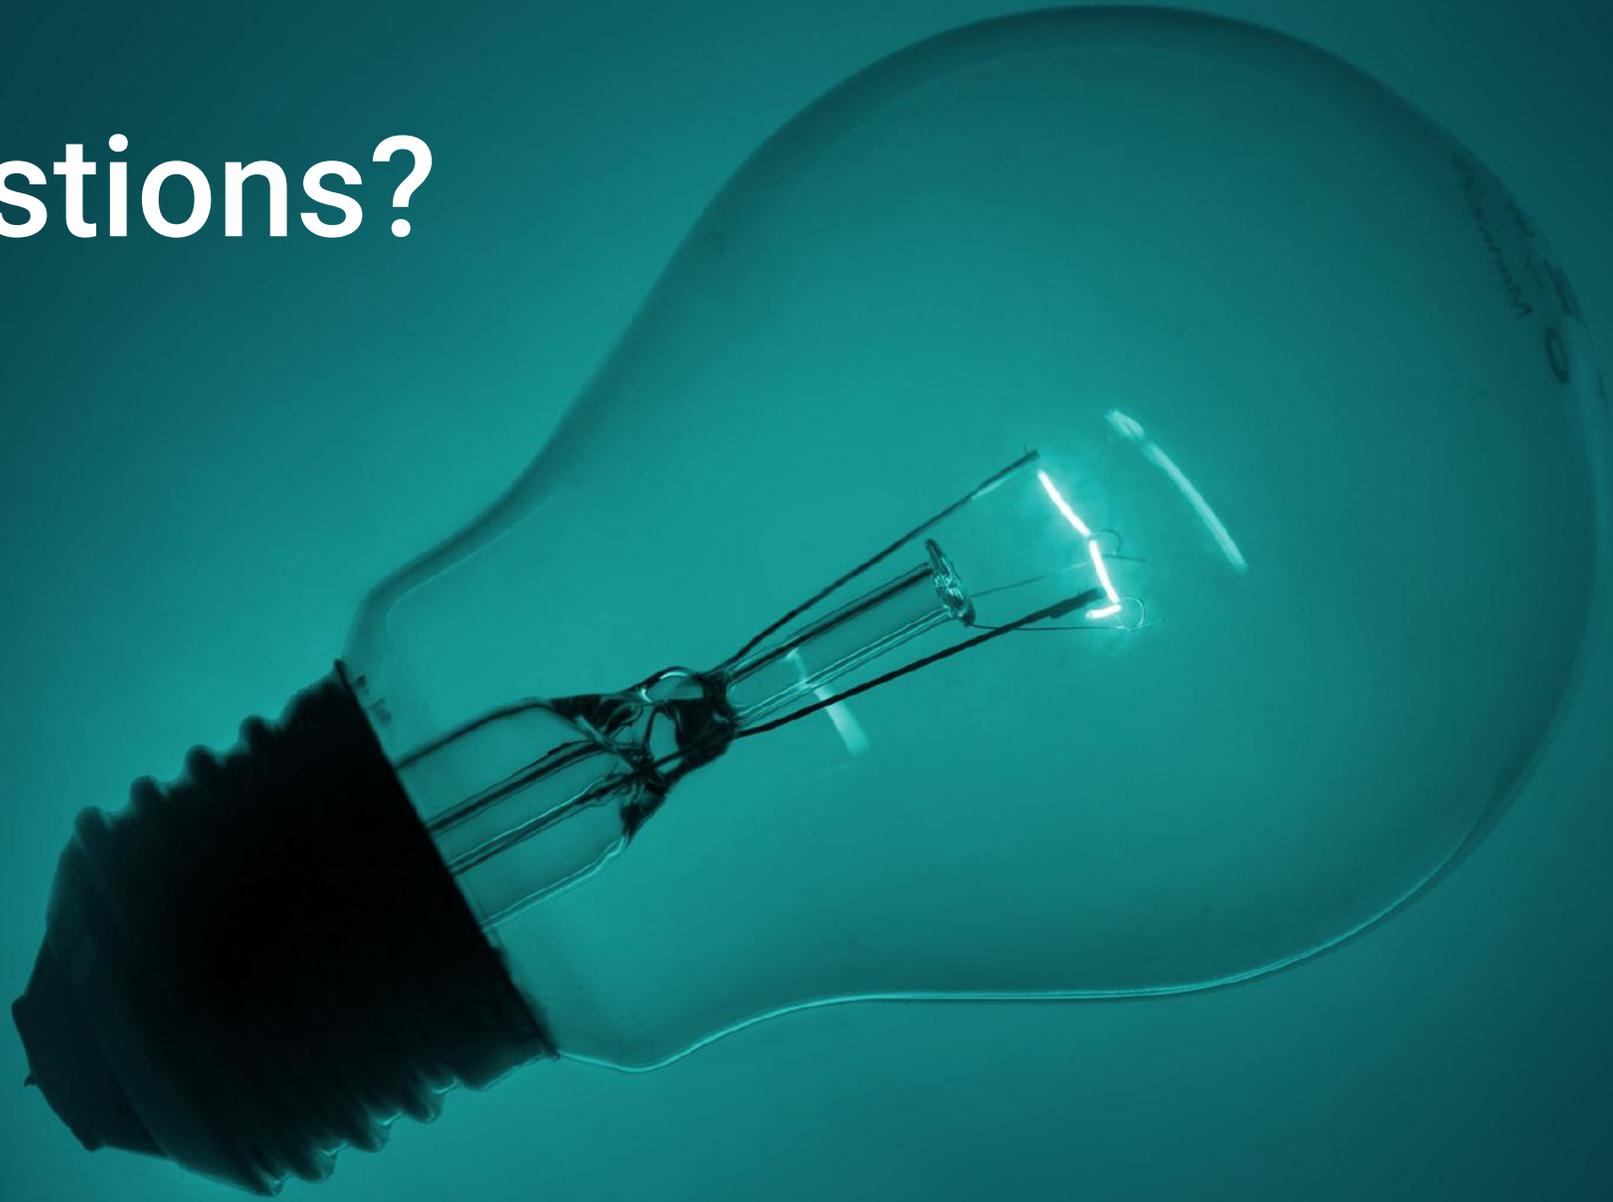

- Recover from unexpected system breakdowns
- Retry message delivery on transient failures
- Resume message delivery after non-transient failures

A perfectly completed
puzzle

Ballerina

Questions?

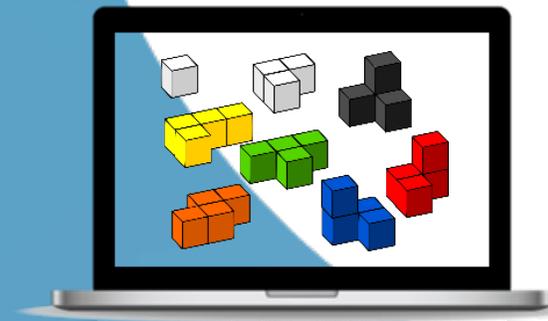

Thank you!

If you have any further questions, please email contact@ballerina.io or raise them in the Ballerina Discord server.

ID System Integration and Interoperability with MOSIP

By: Khaled SAMIR - ID Architect

MOSIP Connect – Addis Ababa
7th of March 2024

1

INTRODUCTION

OVERVIEW OF TODAY'S TALK

SPEAKER SELF-INTRODUCTION

ACHIEVED PROJECTS

INTEGRATION WITH MOSIP

INTEROPERABILITY WITH MOSIP

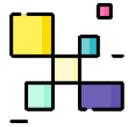

JOURNEY AND CHALLENGES

2

Integration Challenges

Common Challenges

DATA SECURITY

Sensitive data are stored in the ID systems including biometrics which requires a high level of security not only where is saved but also during processing and sharing.

VARYING STANDERS

Systems have different interfaces adapted and different technologies, which makes it challenging to interface efficiently

COST OF IMPLEMENTATION

Working with nonflexible systems take lots of efforts to implement as well as to integrate with external systems which impacts the decision to use these systems

TIME FOR ADAPTATION & SCALABILITY

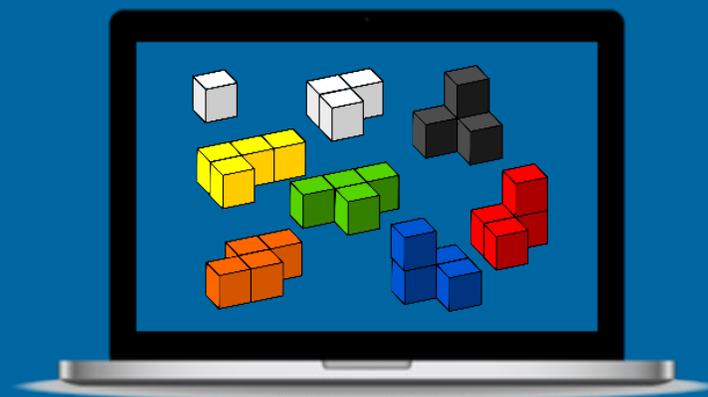

Fast implementation and customization are something crucial for ID systems as the regulation changes, also many stockholders are involved.

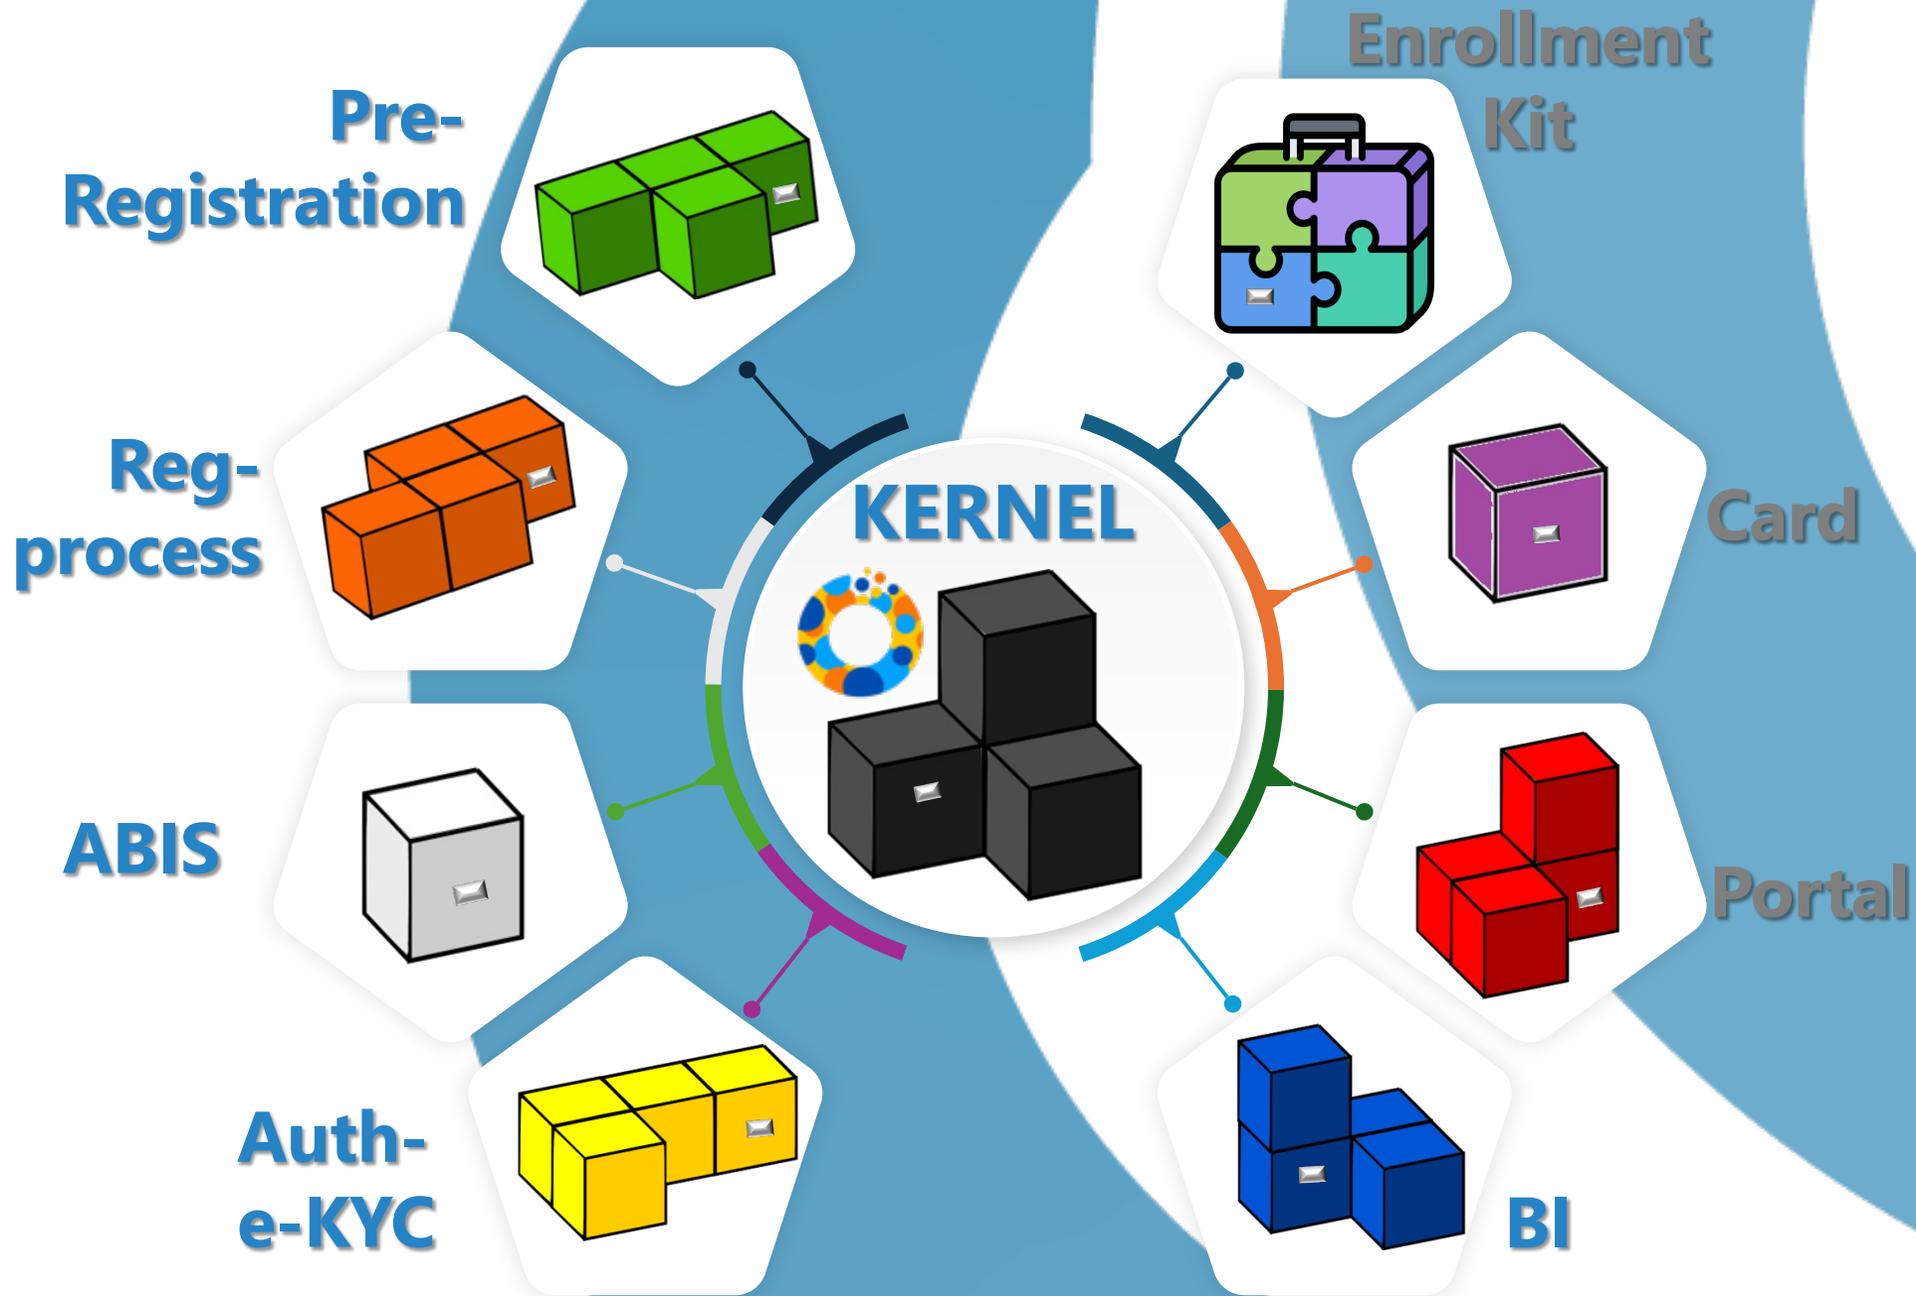

DATA SHARING

Easy data sharing is one of the most important to consider, how to secure its access and make is as easy as possible for seamless usage.

 **ABIS**

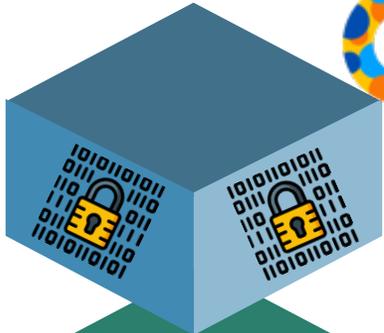

AUTHENTICATION | E-KYC

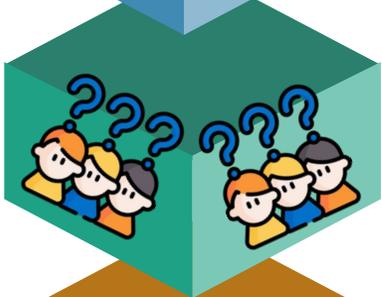

Atos

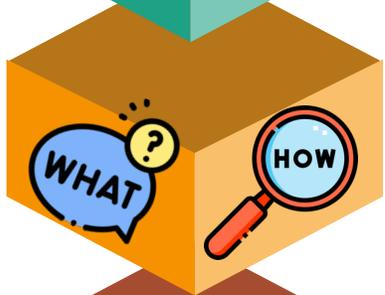

CONTROLLED AUTH & E-KYC

**DATA
ENCRYPTION**

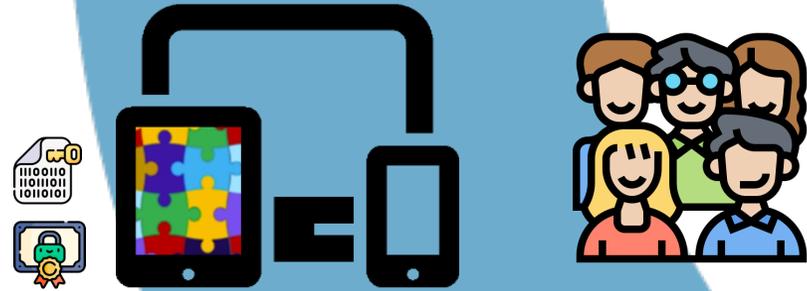

**WHO IS
ACCESSING**

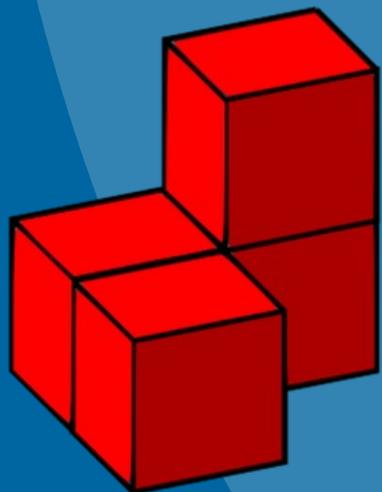

**ACCESS
WHAT & HOW**

**CHALLENGE TO
ACCESS**

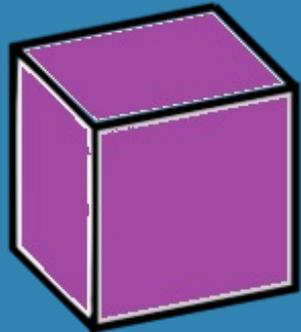

- SEND DATA AFTER PREPARATION & ENCRYPTION
- VERIFY SOURCE LICENCE & CERTIFICATE
- DECRYPT THE REQUEST & PROCESS IT
- VERIFY THE REQUEST & ACCESS LEVEL
- RETURN E-KYC IF CHALLENGE PASSED

BUSINESS INTELLIGENCE

KERNEL

Atos

MOSIP ENABLEMENT

APIs & Messaging systems

MOSIP give great number of APIs ready to use as well as interfaces with messaging systems

Data Share

Core important component that work on sharing data in secure & efficient way

Secure data

High level of data security in different level as well level of access

Standards

Defining standards on how to interface with different modules in MOSIP

QUESTION ?

Atos

THANK YOU
